

Perkin Elmer/Genomic Solutions Investigator ProPic Robotic Workstation

1. Image analysis for both manual spot selection and automated database query selection.
2. Automatic gel plug excision from small to large-format acrylamide or Duracryl gels.
3. Direct dispense spots to output plates for digestion.
4. Clean and keratin free.
5. High throughput: allowing unattended runs of up to 768 spots.
6. View and pick from a variety of stained gels (coomassie blue, silver stained, and SYPRO fluorescent stained gels).
